

Bensan Quinzyme Sponge based on Quinzyme-Extra technology.

Safecare's Bensan Quinzyme Sponge is an individually packed enzymatic detergent sponge used for the bedside cleaning of medical lensed instruments such as rigid and flexible scopes, surgical instrumentation and accessories. The high concentration of 5 enzymes ensures a broad cleaning spectrum. The addition of various non-ionic and anionic enzymes further enhances the cleaning efficacy and the citric acid provides value anti-microbial action.

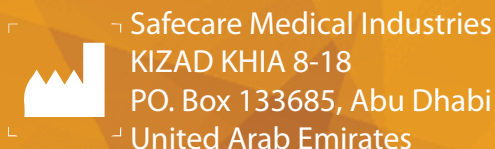

Bensan Quinzyme Sponges are uniquely contoured to fit around the outside sheath of scopes and are pre-saturated with Bensan Quinzyme RTU to provide a quicker, more thorough pre-cleaning. Bensan Quinzyme is a neutral pH, multi-tiered enzymatic detergent, specifically formulated to remove gross contaminants while targeting insoluble polysaccharides that encase Biofilm, exposing them to high level disinfectants or liquid chemical sterilants.

This helps aid in the removal of all Bioburden and Biofilm from scope surfaces. Bensan Quinzyme Sponges, now with Quinzyme-Extra technology, are highly recommended for all scopes where Biofilm build-up can develop as a result of constant exposure to wet and dry phases during usage and reprocessing. These super absorbent sponges are designed to hold the Bensan Quinzyme in, so that it guarantees to disperse the detergent over the scope surface and distribute it more evenly. This will provide longer contact time with Biofilm and contaminants so that the detergent can help break them down.

FEATURES

- Proprietary blend of 5 enzymes, surfactants, sequestering agents and excipients designed to break down all bioburden including blood, proteins, carbohydrates, polysaccharides, fats, oils uric acid nitrogenous compounds and cellular materials
- Perfect for use on all flexible and rigid scopes and cannulated instruments
- Individually packed in a ready-to-use soaking tray with 500mL of highly efficient ready-to-use Quinzyme solution. No dilution or addition of water required, reducing the risk of spills and cross contamination.
- The product is bacteriostatic resisting the growth of mold and fungi
- The product is compatible with all endoscopic parts including lenses, cameras, lighting fixtures or wair/water nozzles
- Lint Free /Latex Free / Dust Free
- Developed and manufactured in the UAE with highest quality ingredients
